

visit bruce nuclear power development

Canada's nuclear power capital

how to get there

visit bruce

Visit Bruce Nuclear Power Development, located on the shore of Lake Huron midway between Port Elgin and Kincardine.

The development is a joint project of Atomic Energy of Canada Limited and Ontario Hydro and includes the operating Douglas Point Nuclear Power Station, the Bruce Heavy Water Plant and the Bruce Generating Station.

An information centre is located at the site where visitors can explore the exciting world of nuclear power.

Attractions at the information centre include a film and slide presentation, a guided tour of the exhibit and models area and a chance to witness construction from an elevated observation deck.

Casual visitors and special groups are welcome. Arrangements for group tours can be made by writing to Bruce Nuclear Power Development, Information Office, Box 1000, Tiverton, Ontario, or by telephoning 368-7031.

The information centre is open daily from 10:30 a.m. to 5:30 p.m. from mid-May to mid-October.

Guides are on duty to explain the story of nuclear power and answer questions. Bus tours of the Bruce complex are available on weekends and holidays. Pamphlets describing Canada's nuclear power program and the Bruce development are also available.

There is no charge for admission.
